[Laravel 6 Latest Questions](#)

Read Latest interview Questions on Laravel Framework.

Q1. [Explain what is Laravel](#)

Laravel is an open-source and free PHP framework. This means that this framework can be used for any purpose and the users can study it and modify or make changes in it as well. It is a web framework so it is created for the development of other software and web applications. Moreover, it follows the architectural pattern of the model-view-controller. And it is based on the previous PHP web framework, Symfony.
